

es.ull.esit.app.Login.jButton1
ActionPerformed

```
graph LR; A[es.ull.esit.app.Login.jButton1ActionPerformed] --> B[es.ull.esit.app.middleware.model.User.getRole]; A --> C[es.ull.esit.app.middleware.model.User.getUsername];
```

The diagram illustrates a dependency or call relationship. A single source node on the left, representing an event (ActionPerformed) from a JButton, has two outgoing arrows pointing to two separate target nodes on the right. These target nodes represent method calls (getRole and getUsername) on a User object within a specific package and class hierarchy.

es.ull.esit.app.middleware.model.
User.getRole

es.ull.esit.app.middleware.model.
User.getUsername
